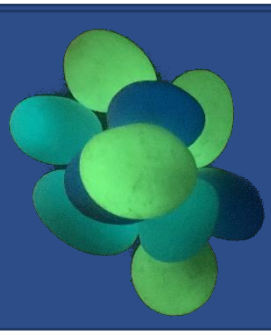
Product Data Sheet:

Eli-Glow Photoluminescent Boulders

Mixed colours



Eli-Glow Photo Luminescent Boulders offer a unique and stunning addition to gardens, pathways, flowerbeds, aquariums and fishponds.

- Size approximately 50mm long x 45mm at their widest point
- 12 mixed colour boulders per bag
- Available in 3 colours: Cobalt Blue, Green and Aquamarine Blue
- Will glow for up to 8 hours with as little as 30 minutes exposure to daylight
- Any ambient light nearby will reduce the glow visibility

The glow in the dark pebbles are encapsulated in a non- toxic, odourless plastic resin. They do not need power, electricity or batteries as they absorb UV energy from daylight or indoor lighting and release the energy after dark in the form of an ambient glow.

This product represents cutting edge technology in energy zero, self-sustaining lighting. The pebbles have the ability to fully recharge over an indefinite time period and are harmless for interior / exterior use.

The resin binder is water resistant, making it suitable for aquatic applications. As with any other item which can be used in a fish pond or aquarium, we recommend the glow pebbles are washed first.
